THE WELD THAT HELD

Solence has developed something better than the old-style wire or chain.

"PITTSBURGH PERFECT" FENCES ARE WELDED BY ELECTRICITY.

This is the modern method of construction. Years of life are added through the elimination of serious fence defects.

A WRAP holds the electric arc in place, and the heat is applied to the joint. The electric arc is applied to the joint, and the heat is applied to the joint. The electric arc is applied to the joint, and the heat is applied to the joint.

STAYS CANNOT SLIP. They are always just where they were put. Dry and green when become one piece when the union is made. The fence is like a solid sheet of polished steel.

Every Rod Is Guaranteed Perfect.

Don't allow your prejudices to favor of the rapidly declining and now antiquated methods you have hitherto known, to warp your good judgment.

"PITTSBURGH PERFECT" FENCES REPRESENT PROGRESS, because hundreds of thousands of dollars worth of standard material is daily welded by electricity.

The fence on the average single barrel in the isolated country's grocery store is an electrically welded product.

If your fence was made in a large factory, it is then welded by electricity.

"PITTSBURGH PERFECT" fences are made by this modern, simple and marvelous process, producing "THE WELD THAT HELD."

A jolly fishing party went to the beautiful Gaudalope river Sunday. Lots of nice fish were caught, all had a nice time taking boat rides, while others enjoyed playing a game of football.
